Abstract (en)

[origin: EP2048311A2] A shock absorbing stopping device (10) for sliding panels, combined with metal section bars wherein carriages (68) fixed to said doors slide, comprises a footing or plate-shaped support (12), made of metal or other suitable material and of substantially rectangular shape, wherealong a shock absorbing piston (16) of the silicone, air or equivalent type is arranged in longitudinal direction; said piston interacts with a spring (52) which develops about the piston itself along two opposite sides and a head of the same. At the opposite sides thereof, the spring (52) engages with a pin (46) arranged transversally in a linear slot (28) obtained along a kerf (30) obtained in the central-front side of the support (12), orthogonal to the footing (12).
