Abstract (en)

[origin: WO2008014874A1] The invention relates to a measuring element (20;22;26;27;29;30) for measuring a colour register, having at least two part measuring elements (21;24;25;28;31) which are printed over one another, wherein each part measuring element (21;24;25;28;31) is produced with an individual printing unit, wherein each part measuring element (21;24;25;28;31) has an at least one-dimensional pattern comprising repeating regions having a different optical density or a different area coverage, and wherein printing said part measuring elements (21;24;25;28;31) over one another produces an interference which serves as measuring variable for the colour register.
