Abstract (en)
[origin: WO2008009736A1] Self-closing pivot hinge The self-closing pivot hinge according to the invention comprises a first part attachable to a door/window and a second part attachable to a door/window frame. The first and second parts are rotatable with respect to each other about a rotation axis from a closed position to at least a first open position. The hinge further comprises a spring, functioning as a torsion spring, mounted along the rotation axis and providing a self-closing function to the pivot hinge. A pre-tensioning member is provided for engaging one end of the spring and applying a pre-tension to it. An adjusting mechanism enables adjustment of the position of the pre-tensioning member and hence the pre-tension applied to the spring.
