Abstract (en)
[origin: WO2008018678A2] The present invention discloses an air conditioner, including: a suction hole; a blower positioned to suck the air through the suction hole; a heat exchanger positioned to exchange heat with the air sucked by the blower; a passage extended to transfer the air from the suction hole to the blower and the heat exchanger, one end of the passage being opened; and at least one discharge hole positioned with a gap from the opened end, for discharging the air heat-exchanged in the heat exchanger, the at least one discharge hole being rotatable relatively to the opened end.
