Abstract (en)

[origin: WO2008015359A1] The invention relates to the field of three-dimensional graphical modeling methods. It concerns a method for the three-dimensional graphical modeling of an interface area (j2, i4) between at least two mechanical parts (1, 2, 3, 4, 5), comprising a step for sending (cp), to a target software resource (10) under the control of a user, alarm information related to the modification of a part in the interface area, performed in another software resource under the control of another user; a step for displaying, in the target software resource, a three-dimensional graphical modeling of the interface area incorporating said modification, while activating in the target software resource a graphical alarm element (11) representing the alarm information.
