Abstract (en)

[origin: WO2008017297A1] The invention relates to a control device, in particular an electric switch (4) for use for an electric hand tool (1), such as a rechargeable and/or mains electric tool, for example drills, grinders, saws, planes, right-angle grinders or the like, with an electric motor (3). The switch (4) has a housing (5) for accommodating at least one heat-producing component part, such as a power transistor, a MOSFET, a triac or the like, which is arranged in particular in an electric circuit arrangement, which is used, for example, for controlling and/or regulating the electric motor (3) by means of corresponding control and/or regulation of the electric load current flowing through the component part to the electric motor (3). A means (8) for conducting heat is connected on one side to the housing (5) of the electric switch (4) and/or to the heat-producing component part, in particular to the power semiconductor located in the housing (5), and on the other side to a cooled region (9) associated with the switch (4).
