Abstract (en)

[origin: WO2008017385A1] An improved antenna arrangement is characterized by the following features: the antenna arrangement comprises at least one dipolar emitter arrangement (3) with the associated supporting device and/or balancing (21) and the associated dipole and/or emitter halves (3a) and the reflector or the reflector element or the reflector frame (11), which are formed from a common part, and the material of this common part is electrically conductive or is provided with an electrically conductive surface or surface layer if it comprises a dielectric material.
