Abstract (en)
[origin: WO2008017368A1] The invention relates to a communication system for providing services to users of terminals which can be operated in the communication system, having one or more service platforms for providing the services, having at least one online charging unit for online charging for services and having at least one offline charging unit for offline charging for services, where the communication system has at least one control unit which is designed such that it takes one or more predetermined parameters as a basis for attributing a service used by a user to the online charging unit and/or to the offline charging unit in real time.
