Abstract (en)
[origin: WO2008075852A1] A dual tuner module comprises: a first tuner comprising an oscillator generating a reference frequency, selecting a channel using the reference frequency, and generating a first signal from a received radio frequency (RF) signal; a first orthogonal frequency division multiplexing (OFDM) demodulator demodulating the first signal transmitted from the first tuner; a second tuner selecting a channel using the reference frequency transmitted from the first tuner, and generating a second signal from the received RF signal; and a second OFDM demodulator demodulating the second signal transmitted from the second tuner.
