Abstract (en)
A latching system (35) for a foldable table having two tabletop halves each having a bottom surface and an end surface includes a receiver (34) disposed on the end surface of the first tabletop half and a latching mechanism (32) disposed on the end surface of the second tabletop half. The latching mechanism (32) has an L-shaped anchor (40) and a pivoting clasp (38). A bottom leaf (48) of the anchor (40) is fastened to the bottom of the second tabletop half and an end leaf (50) of the anchor (40) is fastened to the end surface of the second tabletop half with a plurality of fasteners. The anchor (40) and clasp (38) have one or more hinge barrels (39,41) for receiving the hinge pin (42) so that the hinged clasp (38) pivots about the hinge pin (42) relative to the anchor (40). The hinged clasp (38) detachably mates with the receiver (34) and thereby latches the two tabletop halves in a storage position.
