Abstract (en)  
[origin: EP2050709A1] The device has a prismatic supporting girder (3) and a supporting element (5) arranged at a work machine. The girder is movably supported at the supporting element via a bearing device (4). The bearing device comprises a supporting girder receptacle (5b) arranged at the supporting element. The supporting girder extends into the supporting girder receptacle of the supporting element and possesses a cross sectional surface, by which the girder is directly supported in the supporting girder receptacle. The supporting girder is designed in a cylindrical or concave type.
