Abstract (en)

[origin: EP2050854A1] The system has a user interface (5) transmitting order of washing to a control unit (6). The unit (6) generates control signals (C1, C2) and operation signal (S) based on the order of washing. Disinfection product distribution units (9) introduce a disinfection product in a tank (1). The interface has nine buttons (B1-B9) for inputting and transmitting a normal washing order (OB1) and disinfection washing order (OB2). A control unit (10) automatically controls the units (9) for introducing the disinfection product in the tank, during a last rinsing cycle, after receiving the order (OB2).
