Abstract (en)
The drum type washing machine includes a drum type washing tank (202), a front panel (208) around an inlet (211), a washing machine outer case (201), a front frame reinforcing plate (210), a door body (209), a hinge (214), a detent part (215), and an opening cover. A door body of first layout type (209R) where the hinge is placed at a first side of a perpendicular line passing through the central point of the inlet, and a door body of second layout type (209L) where the hinge is placed at a second side opposite to the first side with respect to the perpendicular line are selectable. The plane shape of the front frame reinforcing plate (210), opening cover and door body (209) is formed of different symmetrical components to the central point in the door body of first layout type and the door body of second layout type. The washing machine outer case (201) and the front panel (208) are formed of same components in the door body of first layout type and the door body of second layout type.
