Abstract (en)

[origin: EP2050899A1] The device has a handle (1) with exterior and interior sections (2, 3) respectively including webs (4, 7) defining external faces (5, 8) and internal faces (6, 9), which are respectively separated from the external faces by thicknesses of the webs. Connection units (10) connect the sections to permit cooperation of the sections when the sections are connected such that the internal faces are placed against and separated from each other by an internal space (11). The handle has a thickness (h) conferred by the thicknesses of the webs along with added thickness of the internal space.
