Abstract (en)

[origin: EP2051012A2] The device has a grip body (10) with a grip region (12), which is partially formed by a slip resistant layer (14), which is partially transparent. The layer is partially designed as coating and is formed by a lacquer i.e. two-component-wet paint. The layer extends to a larger part in a circumferential direction of the grip body. The grip region is formed as round cylinder casing, and the grip body exhibits an external visible surface. The layer covers a printing (20) on the grip body. The grip body is partially formed from metal. An independent claim is also included for a household appliance actuation device manufacturing method.
