Abstract (en)

[origin: WO2008010241A1] A method of including CM-glucan in small transparent phospholipidic vesicles. The CM-glucan molecules are encapsulated in the core of the liposomes or stick to the liposome membrane forming a specific complex which improves the penetration of CM-glucan into the skin and increases the bioavailability into cells. This phosphoglucan complex also improves the bioavailability of CM-Glucan upon oral or ophthalmic applications and gives a synergistic effect together with lecithin.
