Abstract (en)

[origin: DE102006038191B3] The device (1) has a switch lock (4) connected with a carrier part (3) by clamping using corresponding areas of two sideplates (11) of the lock. The side plates have a lateral flanging part on a front side, where the part is designed such that the part is engaged behind a projection of the carrier part. The side plates have a tongue shaped fixing unit arranged parallel to the front side. The fixing unit is provided in a holder that can be inserted from an upper side of the carrier part, and is rotatable around a longitudinal axis such that the fixing unit is fixed in the holder.
