Abstract (en)

[origin: WO2007132112A2] This domain server comprises a zone file comprising distribution rules which define a partition of all the sub-folders of this domain into a plurality of sub-zones. The DNS data of each of these sub-zones is hosted by a partition server. This domain server is able to obtain, from zone files, information which makes it possible to identify the partition server capable of responding to a request, transmitted by a client, with a view to obtaining a DNS folder.
