Abstract (en)

[origin: WO2008019959A1] The invention relates to a method for producing a three-dimensional light-emitting component (305a, 305b) comprising at least one electroluminescent structure (102, 202, 406). According to said method, a substrate (101, 201, 407) is heated, deformed and connected to the electroluminescent structure. The invention also relates to a light-emitting component that has been obtained according to said method.
