Abstract (en)  
The frame has a fastening unit for fastening the frame at a human body. Front and rear shields (10, 11) are connected with each other by a spring steel component (12) through shoulders of the human body. The rear shield is connected with a waist belt (16) of the frame. A drive unit e.g. ventilator, is provided for pumping air through channels of a ventilation device of a piece of clothing for conveyance of air. A rod (14) extends into a tube (15), where the tube and rod combination is attached to the human body such that movement of the rod in the tube produces electric current.

Abstract (de)  
Die Erfindung betrifft ein Tragegestell mit Mitteln zur Befestigung an einem menschlichen Oberkörper, mit einem schildförmigen vorderen und hinteren steifen Bereich (10, 11) Der vordere und der hintere schildförmige Bereich (10,11) sind über die Schulter eines menschlichen Oberkörpers nur über Federstähle (12) miteinander verbunden. Der hintere steife Bereich (11) ist mit einem Hüftgurt (16) des Tragegestells verbunden.
