Abstract (en)

[origin: EP2052651A2] The holder i.e. hanging device (1) has two bar elements (2a, 2b), which form a gap for the arrangement of surface elements in the gap. A bracket (5) is provided for mutual holding of the bar element (2a) at the bar element (2b), and encompasses the bar elements. An aluminum bar is provided with an inner area for mounting a clamping bar (2) in the inner area of the aluminum bar. The aluminum bar has a longitudinal opening through which the surface elements are guided outwardly from the inner area of the aluminum bar. An independent claim is also included for a device for fixing and/or mounting surface elements.
