Abstract (en)
[origin: EP2053188A2] The pivot bearing block of a window or door has a baseplate (2) and a bearing eye section (3) which are separately produced and then connected by welding, wherein the bearing eye section is produced by bending a bearing eye basic component. The bearing eye section can be produced by stamping of laser-cutting from a weldable material. The bearing eye section has a female thread for an adjusting screw. An independent claim is included for a method for producing a pivot bearing block.
