Abstract (en)

The turbomachine has a compressor (11) i.e. high pressure compressor, including fixed variable orientation blades arranged circumferentially in a casing (13), where each blade has a control pivot connected to a common control ring (17) by a blade orientation control arm (27). The ring is coaxial to the casing and rotatably mounted at the exterior of the casing. The ring has two sections (30a, 30b) i.e. semi-rings, assembled by lateral connecting flanges i.e. beveled annular segments, that are fitted on both sides of the sections and fitted nearer to ends of the sections by parallel bolting.

Abstract (fr)

Turbomachine comportant un étage d'aubes fixes à calage variable. Un anneau de commande (17) coaxial au carter (13) comporte deux tronçons (30a, 30b) assemblés par des flasques de liaison latéraux (33) fixés avec encastrement de part et d'autre des tronçons au voisinage des extrémités de ceux-ci.
