Abstract (en)
A gas burner system (10; 10a; 10b; 10c; 10d; 10e; 10f) includes a power supply device (12), one or a number of gas burner(s) (14), one or a number of gas valve(s) (16) for controlling the fuel gas passage(s) of the gas burner(s) (14), one or a number of control device(s) (28) each having an operating device (18) for inputting a command signal, a microprocessor (20) for receiving the command signal from the operating device (18) and outputting a corresponding control signal, and a valve control device (24) for driving the gas valve(s) (16) subject to the control signal from the microprocessor (20), one or a number of ignition induction electrode(s) (30) located on each gas burner (14) at one side, and an igniter and inductor combination device (32) for providing a high voltage current to the ignition induction electrode(s) (30) at each gas burner (14) subject to the control signal from the microprocessor (20) to cause the ignition induction electrode(s) (30) at each gas burner (14) to discharge sparks for burning the discharged fuel mixture so that the igniter and inductor combination device (32) stops from providing the high voltage current when received a feedback flame signal from the ignition induction electrode(s) (30) and sending the feedback signal to the microprocessor (20).
