Abstract (en)

[origin: EP2053690A1] The radome (1) has an integrated plasma closure comprising a plasma guiding layer and electrodes (10, 11) for plasma excitation, where the radome has a sandwich structure with a honeycomb core (9) and cover plates (12, 13). The plasma guiding layer is contained in the honeycomb core. The electrodes are arranged between the honeycomb core and the cover plates, and are high frequency (HF) transparent in an operating frequency range of an antenna. The electrodes comprise frequency-selective layers, which are applied as band pass filters in the operating frequency range of the antenna.
