Abstract (en)
[origin: CA2661375A1] The invention relates to a cleaning device (100) which comprises a flood chamber (118) receiving a workpiece (194) to be cleaned and a flooding device for flooding the flood chamber with a liquid cleaning agent. The aim of the invention is to simplify the design of such a cleaning device and to create a flood chamber that can be rapidly filled and evacuated. For this purpose, the flood chamber can be connected to a cleaning agent reservoir (104) and the flooding device comprises a blower (142) for reducing the pressure inside the flood chamber so that the cleaning agent, due to the reduced pressure in the flood chamber, is taken in from the cleaning agent reservoir.</SDOAB >
