Abstract (en)
[origin: WO2008009408A1] A treatment machine for bottles, or similar receptacles, having at least one transporting element, further having a plurality of treatment stations provided at the transporting element for receiving one receptacle each, further having at least two receptacle mounts provided at each treatment station, wherein the mounts are displaceable during a receptacle changeover of the treatment machine between a supply position and a working position, in which the respective receptacle mount cooperates in a supporting and/or retaining manner with the respective receptacle provided at the treatment station, and further having means for moving the receptacle mounts of all working stations during the receptacle changeover.
