Abstract (en)  
[origin: US2011182666A1] Described is a drainage device for surface drainage, in particular a drainage channel, comprising a hollow, preferably elongate main body (2) and a liquid-permeable portion (4) covering the main body (2), wherein the main body (2) has at least one opening (8, 9) for connection to an opening of a further drainage device. The particularity of the invention is that the at least one opening (8, 9) has a joining element for forming a fluid-tight plug connection to an opening of a further drainage device.
