Abstract (en)

[origin: WO2008019913A1] The invention relates to a starter for an internal combustion engine, particularly for an internal combustion engine of a motor vehicle, having a housing, on which a fixing flange is configured that can be associated with an internal combustion engine, wherein at least one insulating part (2) can be associated with the fixing flange (4), such that no electric connection exists between the starter and the internal combustion engine. The invention further relates to an internal combustion engine for a motor vehicle, having a starter (1) as described above. The invention also relates to a retaining flange for an electric motor, particularly for a starter of a motor vehicle, wherein the retaining flange is configured in the form of an insulating part (2), and consists at least partially of an electrically insulating material, and/or has at least one electrically insulating insulating element disposed on the retaining flange.
