Abstract (en)
[origin: EP1890202A1] The device (28) has a transmission unit (31) provided with two cams (48, 56) respectively located inside and outside an interior volume (16) of a middle (12) and mounted in rotation at two ends of a staff (36) of the unit in an integrated manner. The cam (48) co-operates with a control lever mounted on a mechanical or electromechanical movement (18) in the volume when the unit is turned. A bezel (34) is movably mounted in rotation on the middle, and has a contact surface cooperating with a support surface of the cam (56), when the bezel is turned to rotate the transmission unit.
