Abstract (en)
[origin: DE202006013075U1] The system has a receiving device (10) to receive and sort conductor pairs (14, 15, 16, 17) of data cables (11). A positioning device (12) has two connector pairs for electrically contacting with the conductor pairs of the data cables and connector pairs of a data socket (13), respectively. Connectors of the connector pairs of the device (12) are connected with one another, where the contacting of the conductor pairs with the connector pairs of the socket is predefined by a relative rotary position between the device (10), the socket and the device (12).
