Abstract (en)
[origin: WO2008022893A1] The invention relates to an arrangement with an electrical switching device (1) with a switching device housing (2) for a switchgear assembly, wherein the switching device housing (2) has a first connecting opening (7) for connecting a first connection module (70, 80) by means of electrical contact-making with a first contact side of the switching device. The switching device housing (2) has a second connecting opening (11) for connection of the connection module (70, 80) for the purpose of making electrical contact with the first contact side of the switching device, wherein either the connection module (70, 80) is connected to the first connecting opening (7) and the second connecting opening (11) is free of connection modules or the connection module (70, 80) is connected to the second connecting opening (11) and the first connecting opening (7) is free of connection modules.
