Abstract (en)

[origin: EP2055483A1] The machine has a display device (1) e.g. touchscreen, displaying a relative position of components e.g. sheet grippers, of the machine in relation to a printed image (13) by superimposing the components on the printed image. A large monitor (10) represents the printed image in an original size and accepts operating commands. A computer calculating print-free locations are provided on the printed image resulting from an analysis of the image as a proposed setting, where the image is displayed in a marked form on a printing material i.e. sheet-type printing material (9). An independent claim is also included for a method for displaying components of a printing material processing machine.
