Abstract (en)

The vehicle has a modular inner cover (I) designed from multiple functional modules (M1-M3) e.g. illumination units, which are connected with each other in such a way that width of the inner cover is adjustable by relative change of position of the modules. The modules are formed in a stretched manner, and arranged parallel to each other. The modules are connected with each other by a bridge (S), and moveably supported on both sides. The module (M3), which lies inside is attached at a roof of the vehicle by a fastener. The module (M3) is arranged at the centre.

Abstract (de)

Die Erfindung betrifft ein Schienenfahrzeug mit einer Innendecke (I), wobei die Innendecke (I) aus mehreren Modulen (M1, M2, M3) aufgebaut ist, die derart miteinander verbunden sind, dass eine Breite der Innendecke (I) durch relative Lageänderungen der Module (M1, M2, M3) zueinander einstellbar ist.
