Abstract (en)

[origin: EP2055825A1] The machine has a drum traversed by drying air provoking from a drying air circuit including a blower, and a lint filter (2) provided with a lint scraping unit (17). The scraping unit is displaced relative to the lint filter and maintained in a position in the machine. The scraping unit scrapes a lint on the lint filter and compresses the lint in a storage zone (18). The lint filter has a visualization unit (28) for signaling filling of the storage zone by the scraped lint. The scraping unit prevents closing of an access door to the drum when the storage zone is filled.
