Abstract (en)

[origin: EP2055830A1] The belt (1) has a fabric of warp fibers and weft fibers, where the fabric defines a paper side (6) of the belt facing away from a driven side (7) and facing toward a corrugated board (50) to be manufactured. The fabric defines the driven side of the belt with the driven side facing away from the paper side and having a coefficient of friction. A material is placed on the driven side for reducing the coefficient of friction of the driven side, where the material is applied to the entire area of the driven side of the belt as a coating.
