Abstract (en)

[origin: EP2055861A1] The method involves positioning strips (4, 5) of insulating material to form a continuous insulating surface on or under rafters (2), and placing a spacer bar (8) against a junction (7) between framework elements. Two assembling parts (9) are utilized, where each part includes a spacer bar support frame for holding an axial end of the spacer bar, and a fixation frame is fixed to one of the parts. The spacer bar is assembled to the elements via the parts by coupling each axial end of the spacer bar to the support frame of each part and hooking the fixation frame to one of the elements. An independent claim is also included for an accessory positioning assembly for positioning a flexible insulating material in a roof of a building.
