Abstract (en)

[origin: EP2055958A2] The device has a pump (2) connected with a pipeline system of the device, where the pump stands in connection with a motor (18) e.g. brushless direct current motor. A valve (4) has an axially movable valve body (20) that is attached at an impeller of the pump, and the motor is operable in two directions. The valve opens or closes in dependent of the directions of rotation of the motor, where the motor stands in effective connection with the valve. The valve body is coaxially movable along a shaft (6) connecting the motor and the pump.
