Abstract (en)
An air conditioner and an operating method thereof are disclosed. The air conditioner is provided with a plurality of controllers, indoor units and outdoor units are controlled by the plurality of controllers, setting data is sent to and received from the plurality of controllers so as to be applied, and each of the controllers is configured to output operational information for the units corresponding to an inputted user command on the screen. Accordingly, a setting changed by a predetermined controller may be applicable to other controllers. Thus, a friction between the plurality of controllers is prevented, the efficiency of control is enhanced, the plurality of units can be selectively monitored and the operation control thereof is possible, and the convenience of management and control of the air conditioner is enhanced.
