Abstract (en)  
The solenoid has an anchor (6) and a field coil (3) that are provided in area of a pot-shaped solenoid body (1), where spaces provided between the anchor and the field coil are filled with a magnetically conductive material (9). The magnetically conductive material is selected from particle-shaped iron in the form of iron powder and iron boring. The magnetic leading material is embedded in a carrier in the form of flowable product or paste, and is embedded in a casting compound, which is produced by hardening fluid comprising the solid iron.

Abstract (de)  
Ein Hubmagnet, enthaltend einen topfförmigen Magnetkörper aus massivem Eisen und einen Anker, sowie mindestens einer Erregerspule, ist dadurch gekennzeichnet, dass im Bereich des Magnetkörpers (1), des Ankers (6) und der Erregerspule (3) und zwischen diesen Elementen vorhandene Räume durch magnetisch leitende Materialien (9) ausgefüllt sind.
