Abstract (en)  
[origin: EP2056403A2] The spring-loaded connector (1) has a conductor line piece (2) having two clamping positions. The clamping positions are interacted with a spring end for reconnecting of electrical conductors. The conductor line piece is arranged oppositively for a center piece (3) such that the conductor inserted in the conductor lead through openings (5a,5b) lies between the center piece and the clamping position.
