Abstract (en)

[origin: EP2056650A2] The holder (11) has heating elements, which are elongated and process in channel (16) on an upper side (12) of the holder. An opening (22) is provided in a central region of the holder for bringing in or passing a klixon (28) from the upper side such that connections of the klixons are projected over a lower surface. Independent claims are included for the following: (1) an electrical heating device, which has a holder and side wall of channel; and (2) a method for manufacturing a heating device.
