Abstract (en)
[origin: FR2905053A1] The shoe (1) has a porous layer (5) that is provided between an inner liner (4) and a waterproof-breathable membrane. The porous layer forms a vertical ventilation space and extends on both sides of inner and rear parts of the shoe. The layer encloses a rear-foot zone along its height. The layer is formed of foam, and has a thickness of order of 10 millimeter. The part has an asymmetrical configuration with respect to a vertical plane corresponding to a median plane of the shoe. The layer has a median cut (11) that is provided in a base part. An independent claim is also included for a walking kit comprising an impermeable shoe and a detachable part.
