Abstract (en)

[origin: FR2905061A1] The device has a lever (10) in a goose-neck shaped head (10a) and forming a non circular curvilinear interior configuration with spacing amplitude towards an outside. An anchoring projection (10c) in a maximum amplitude zone is perpendicularly oriented for cooperating in a snap ring (13), where the ring is placed in a flask of a receiving an end piece (12) of a mandrel of a material roll. A balancing weight device is integrated in the movement of rotating drum and includes a balancing weight cam cooperating with the lever at each turn of the drum.
