Abstract (en)

[origin: WO2008026981A1] The present invention relates to an exercising apparatus (2) for stretching of the calf muscle, comprising a foot support (4) arranged with an inclination (a). On one side (18) on the foot support (4) a bar (22) extending in a vertical direction is arranged in a joint (20). The bar (22) is rotatably arranged to the foot support (4) in said joint (20). The bar (22) comprises a handle part (23) and a supporting part (24). The supporting part extends at least around a part of the calf, where stretching of a calf muscle on the practician can be achieved by bringing the bar (22) during rotation in the joint (20) in a direction (R1) towards a first part (12) of the foot support while a heel part of the practician is secured at the foot support (4).
