Abstract (en)

[origin: WO2008025915A1] The invention relates to an automobile air-conditioning system, particularly a hybrid electric car, equipped with a heat engine (2), with a direct or indirect means of heat exchange with a battery (5) and a hydraulic circuit, the said system comprising an evaporator (41), a unit heater (3) and means for providing air to the unit heater at the evaporator exit, characterized in that it comprises: - a hydraulic circuit for powering the heat engine (21)- a hydraulic circuit for powering the unit heater (31) and a secondary hydraulic circuit (51) for powering the battery connected to the hydraulic circuit powering the unit heater.
