Abstract (en)
[origin: WO2008025594A1] A furniture hinge (1) comprises an installation plate (2) on which a side part (3) is arranged, and a hinge part (4) which is held pivotably on the side part (3) via a supporting lever (11) and a guide lever (6), wherein a damper (14, 15) is provided to damp the movement of the hinge part (4) relative to the side part (3). Furthermore, a slide (12) is mounted on the side part (3), bears against a contact surface on the damper (14, 15) and produces a coupling between the damper (14, 15), on the one hand, and the supporting lever (11), the guide lever (6) or the hinge part (4), on the other hand. In this case, the slide (12) forms a displaceable intermediate element which is fitted in a non-fixed manner to the damper via a spindle connection and therefore compensation for tolerances is possible.
