Abstract (en)  
[origin: WO2008110142A1] The invention relates to an LED module (10) comprising a support and a plurality of light sources (1), every light source (1) being arranged on the support in such a manner that the LED module (10) has a radiation homogeneity  $H_{\text{BLU}}$  that is smaller than the statistic mean  $H^*$  of a radiation homogeneity distribution, the radiation homogeneity distribution being based on a plurality of LED modules (10) having a random arrangement of the light sources (2). The invention also relates to a method for producing said LED module.
