Abstract (en)

[origin: WO2008017959A2] The invention relates to a device and a method for producing a data supply, having a first data connection interface (1) for producing a data connection (http) to a server (S), via which data (W(KP)) which are encoded in accordance with a first transport protocol can be received. A first transport protocol unit (2) carries out a data transport (O{W(KP) }) of the encoded data (W(KP)) on the data connection (http) in accordance with a second transport protocol. A second transport protocol unit (3) subsequently carries out decoding of the encoded data (W(KP)) in accordance with the first transport protocol, whereby the original supply data (KP) are produced. A very cost-effective data supply is thereby obtained.
