Abstract (en)
[origin: EP2019054A1] The system has a conveyor belt (1) traveling along forward and return strands and fastened to a lower side of carrying beams (2). The beams are transversely oriented to and spaced apart in a travel direction of the belt. Running rollers (5, 5a) are mounted at lateral ends of the beams, and roll on carrying ropes (6, 6a) or carrying rails provided along the strands. A sealing strip (3) made of an elastic material is provided between the beams and an upper side of the belt. An upper side of the strip is connected with the lower side of the beams by adhesive bonding at a part of the beams.
